Forecast for Friday 08 Nov 2024

Weather: Cloudy and overcast during the morning with mist, fog and occasional drizzle. The cloud tending to lift and break during daylight hours, some bright or sunny spells developing, these most likely across Yr Wyddfa and the northwest during the afternoon. Cloud then increasing and lowering again in the evening. There is a marked temperature inversion due to the dominant high pressure system. This means that some of the higher summits could poke above the cloud tops and be cloud free at times, but details around this are uncertain.

Chance of cloud-free hill tops above 800m: 10% becoming 50% by afternoon, becoming 10% again in the evening.

Low Cloud and visibility: Extensive low cloud bases 300-400m, down to 100m on southeastern slopes. Summits above 700m free of cloud. By the afternoon cloud breaks in the northwest of the Park. Visibility moderate to very poor, in low cloud and drizzle becoming good at times in the northwest during the afternoon. Very good above any cloud.
